GREENFIELDS PRO NF

THE ALTERNATIVE TO CONVENTIONAL TURF SYSTEMS WITHOUT ANY PERFORMANCE INFILL

Key benefits:

- Great playability - natural behaviour
- Natural look and feel in three shades of green
- No intentionally added microplastics
- Easier to install and maintain
- 100% recyclable into RTA

Engineered to match the performance of good quality natural turf. The pile consists of resilient but soft to the touch pile yarns combined with a voluminous air texturized thatch layer replacing the performance infill. The three shades of green in three different shapes result in a natural look and fresh appearance.

The optimized ratio between pile and thatch yarns in the Pro NF ensures a consistent playing performance in all directions, with enough support and grip for the player to show some skills. The absence of performance infill means no issues with infill splash or migration, no need for expensive infill top-ups or decompaction and a natural looking green surface. The carpet is at its end of life 100% recyclable into RTA to be re-used for multiple applications.

The GreenFields Pro NF is our latest tufted Non-Filled product to offer a true alternative to filled performance systems. It is the perfect product for amateur clubs that want to push the boundaries of a modern sustainable facility.

YOUR PERFORMANCE

This GreenFields performance chart gives a first indication of the relative performance compared to our other products in the same category. GreenFields offers a perfect pitch for every player, and can provide a product that best suits your needs. For further advice, please consult your GreenFields sales representative.

BALL SURFACE INTERACTION

Covers the relative performance for vertical and angled ball rebound, ball roll and shock absorption.

PLAYER SURFACE INTERACTION

Reflects the relative score on optimal grip, skin comfort, hardness and surface impact.

SUSTAINABILITY

Covers infill sustainability, potential infill migration, material footprint and recyclability.

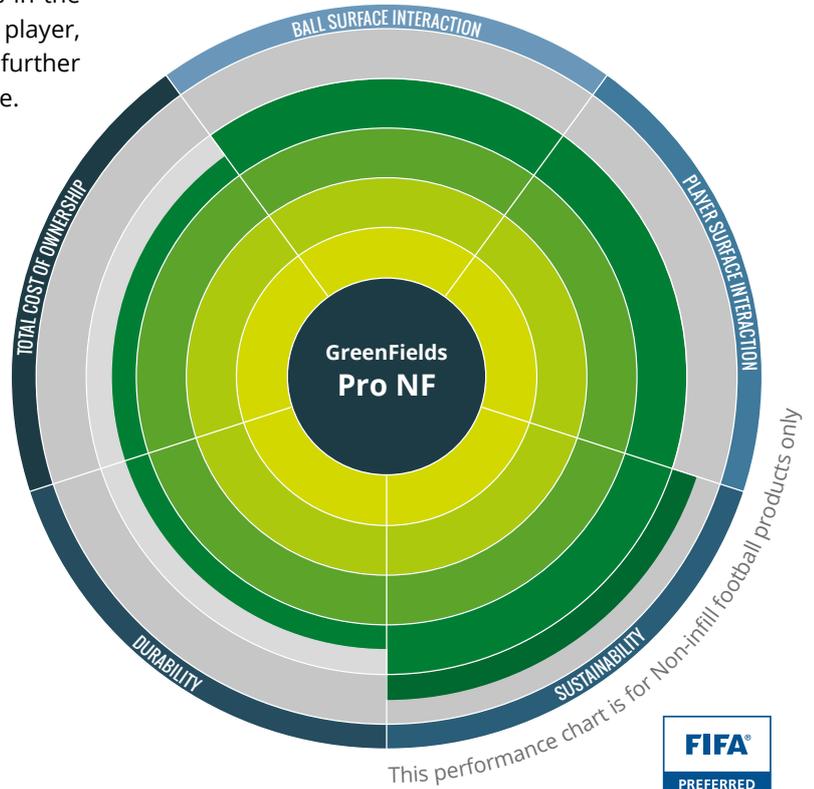

DURABILITY

Reflects the relative durability of the carpet in terms of fibre wear and strength, color fastness and yarn bind.

TOTAL COST OF OWNERSHIP

Reflects the relative costs of the carpet, system components, maintenance and end of life.

GREENFIELDS ECO-RANGE

On a global scale, society is becoming increasingly aware of the exhaustion of our planet. An expanding lack of space demands optimum use of available land. Increasing water shortage asks for solutions to save water resources. Synthetic turf can provide a sustainable path towards optimising space and saving water resources.

GreenFields has always been at the forefront of innovation and improving sustainability; being one of the first to utilise natural infill within our turf systems and continue to lead the way in high-end non-filled systems for sports applications.

The GreenFields ECO-range covers a range of artificial turf systems (from entry level to high-end) designed with a strong focus on sustainability and durable performance.
